

Fladder Danmark A/S - presents new machine at Euroblech 2014:

Fladder® 200/GYRO

The next generation of the well known FLADDER AUT.

The name of the new machine is 200/GYRO partly because several components from the FLADDER GYRO series have been used.

Technically the 200/GYRO offers:

- * More powerful vacuum system where the max. effect has been increased by 30-40%. To reduce noise and power consumption a stepless adjustment of the vacuum unit is offered.
- * Touchscreen, makes the machine even more operator friendly.
- * Conical spindles on which can be mounted either dia. 100 or 200 mm which offers a wider choice of the tools offered by Fladder Danmark.
- * Energy saving system that automatically shuts the machine down if the flow of workpieces stops.
- * Pressure rollers for safe entry and reentry of the workpieces.
